

MIMS/CMMA Seminar on Self - Organization

第10回 自己組織化セミナー

2015年1月16日(金) 15:30~16:30
明治大学中野キャンパス 6階 研究セミナー室

Propagation and aggregation of *E. coli* pattern

Tatsunari Sakurai (Chiba University)

Abstract

For living microorganism, cells are working as smart artificial swimming devices at the microscale. For example, an individual *E. coli* has an ability of the motility, and shows us very beautiful pattern formation [1]. Some mathematical model revealed the secrets of the self-organized pattern by using growth-diffusion-chemotaxis models [2, 3, 4]. We are interested in the relation between the motility of individual *E. coli* and its macroscopic order. And a growth-diffusion-chemotaxis model was reproduced. We would like to discuss our experimental and numerical results in this seminar.
